The Hyundai Verna's next generation, which is also known as the Accent in many countries, has been caught testing under cover for the first time. The vehicle is expected to make its debut in South Korea in late 2021 or early 2022. The new model will likely be based on the Kia Morning, which was launched in mid-2020.

The company's constellation growth signals a return to space and an increased capacity for global customers. "Growing BlackSky's constellation and increasing our rapid-revisit monitoring capabilities are key to our long-term growth strategy," said Charles J. Fadel, CEO of BlackSky. "Our state-of-the-art satellite technology will enable us to provide critical imagery and data to our customers around the world."
